

**THE RIGHT POINT OF VIEW**  
PRODUCT CATALOGUE 2012 | EN

Avers projection screens and accessories are available at the network of 100 local business partners. Sales network still under development, so the number of partners increase all the time.

Avers have began International activities attending Photokina in Cologne in 2004. Since then we present Avers products at the largest European system integration business fair, the ISE in Amsterdam. We have started overseas activities in 2010 presenting Avers products at PALME Middle East exhibition in Dubai. Avers products are already available in 20 countries in Europe and Middle East.

Business success would not happen without our skilled and experienced team:

**Paweł  
Zielinski**  
Managing director  
and chief developer  
(16 years Avers  
experience)

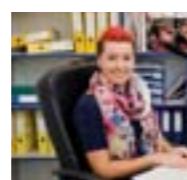

**Jacek  
Łosiewicz**  
Sales Manager  
(5 years Avers  
experience)

**Zbigniew  
Cudnik**  
Salesman

**Eligiusz  
Kowalczyk**  
Quality control  
(13 years Avers  
experience)

**Olga  
Prentkowska**

# PROJECTION SCREENS

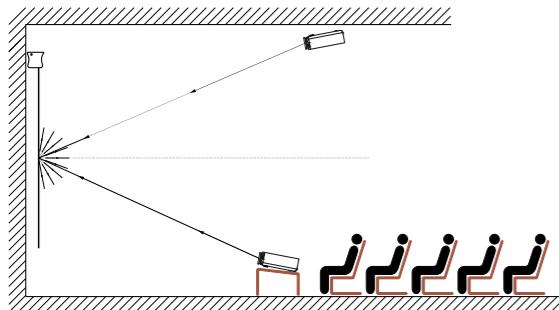

GENERAL INFORMATION

AVERS  
SCREENS

Picture projection is a picture phenomenon, it seems to be very easy and non problematic. The picture is a result of reflection of the light from the projector and environment light at the surface of the projection screen. The projection fabrics is the main and most important screen component. Type of projection surface and it's optical parameters decides about the picture quality and presentation. Fabrics characteristics are described with the following parameters: Gain and viewing angle. Relative reflection coefficient called Gain, describes the amount of light reflected by the surface related to the amount of light reflected by the standard surface. Standard surface is covered either with either magnesium carbonate ( $MgCO_3$ ) either titanium dioxide ( $TiO_2$ ). Both chemical substances are white and they reflect light lossless. Standard fabrics gain is 1.

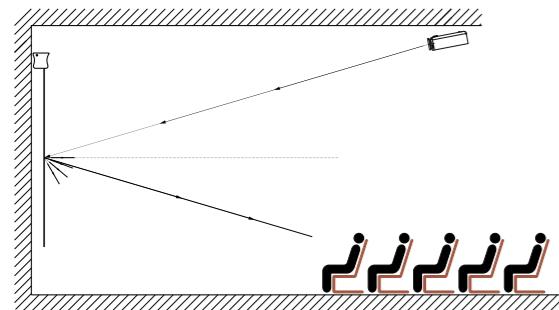

Viewing angle describes the maximum angle the projected picture could be observed without quality decrease. The picture brightness is biggest when observed perpendicularly to the surface and decreases with the increase of the viewing angle. The angle, observed picture brightness decreases to 50% of the maximum value is declared as fabrics Viewing Angle. There is close relation between the Viewing angle and gain parameters. The surfaces with large Gain has Viewing Angle smaller than surfaces with small Gain.

Depending on the light reflection characteristics there are the following projection surfaces: diffusion, reflective, retro-reflective and diffusion-reflective.

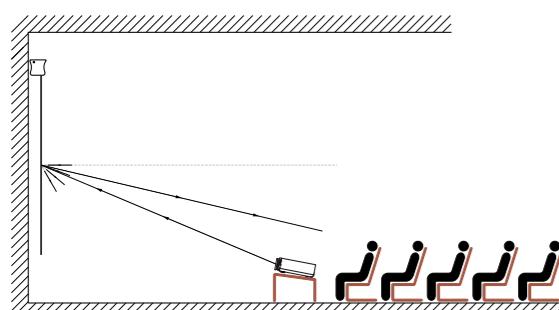

## DIFFUSION SURFACES

They reflect light evenly diffusing it into the space with wide viewing angle. The Gain of the diffusion surfaces is very close to 1. The projector installation method (ceiling, table, with optical angle shift) do not change the quality of the picture displayed at the diffusive surface. Matt White, Matt Grey, White Ice fabrics and White Glass panel are diffusion projection surfaces.

## REFLECTIVE SURFACES

They reflect light directionally into the space similar as mirror. Such reflection characteristics offers higher picture brightness when observed from the direction the light is reflected to, but the viewing angle is limited. Typical Gain values of reflective surfaces are from the range from 1,5 to 3,0. Projection systems with reflective surfaces requires exact positioning of projector, screen and audience. Silver P fabrics is reflective projection surface.

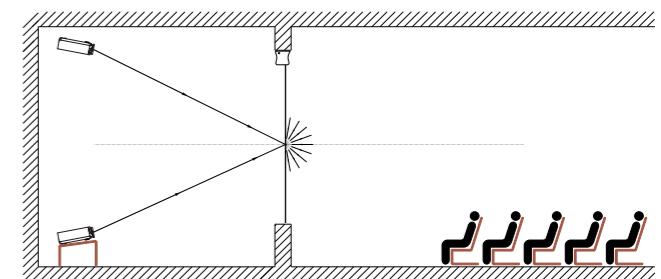

## RETRO-REFLECTIVE SURFACES

They reflect light directionally back to the light source. High picture brightness will be observed from the right direction or the very narrow viewing angle. Typical Gain values of retro-reflective surfaces are from 2,0 to 2,5. Projection systems with retro-reflective surfaces requires projector and audience to be located at the same level and direction. Glass Beaded projection fabrics are retro-reflective surfaces.

## DIFFUSION-REFLECTIVE SURFACES

They transmit and diffuse light into the space. High picture brightness is guaranteed at limited viewing angle only. Typical Gain values of diffusion-reflective surfaces are from the range 2,5 to 4,0. Projection systems with diffusion-reflective surfaces requires precise positioning of projector, screen and audience due to very narrow surface viewing angle. Rear projection fabrics New Coral and Rear projection panels Grey Glass are Diffusion-reflective surfaces.

## SCREEN BLACK BORDERS

Projection screens should have black borders. It is not just a decorative element, but it improves perception of the projected picture quality. The black border separates optically the picture from the background and limits viewers attention to the displayed content. The projected picture surrounded with black bordering is recognized as brighter and higher contrast than picture projected at the same surface but without black borders. On top of that the black borders moves the projected image away from the fabrics edges, so any surface flatness imperfections happening at the fabrics side edges will not affect the image quality. Additional black belt over the picture area is required to lower the position of the picture area, so its bottom edge would be at the ergonomic height. Additional advantage of the wide top border is reduction of light reflected from the screen to the ceiling and increasing ambient light level at the area.

## PROJECTION SCREEN SELECTION RULES

### 1) TYPE OF SCREEN

There are many types of screens at our offer:

- Electric projection screens
- Manually operated projection screens
- Frame screens for fixed installations
- Portable projection screens

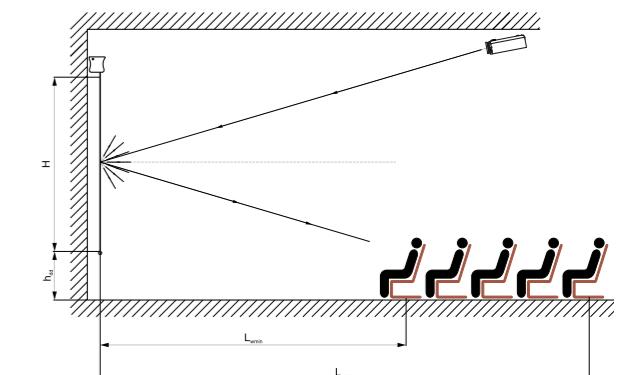

Portable projection screens are recommended if you plan to project pictures at different places and in different conditions. In case of fixed screen installation the selection of electric, manually operated or fixed frame screen depends on the user's individual preferences and planned budget.

### 2) PICTURE ASPECT RATIO

Projection devices display the images of the width to height ratio determined by the unit construction. It is called picture aspect ratio. Projection screen viewing area should have the same aspect ratio as the projection device used in the system. This will guarantee optimal projection performance.

Typical aspect ratios of projection devices and screens:

- 1:1 Full aspect ratio
- 4:3 Video aspect ratio
- 16:9 HDTV wide aspect ratio
- 16:10 PC wide aspect ratio
- 21:9 Cinemascope aspect ratio

# AUTOMATED PRESENTATION SYSTEM

## 3) SCREEN SIZE AND INSTALLATION

Select the screen size and installation method following the rules described below.  
 - Screens size. Distance between the last row of audience and the screen  $L_{wmax}$  should be multiple of screen height  $h$ :

$$L_{wmax}/H = \begin{cases} 6 & \text{(for presentation projection)} \\ 4.5 & \text{(for home cinema projection)} \\ 3 & \text{(for Full HD projection)} \end{cases}$$

Distance between the first audience row and the screen  $L_{wmin}$  should be in relation with screen height as well.  $L_{wmin}/H > 1.5$ , Picture width is calculated based on the Picture height and aspect ratio.

$$W = \begin{cases} h & \text{for 1:1 aspect ratio} \\ 4h/3 & \text{for 4:3 aspect ratio} \\ 16h/9 & \text{for 16:9 aspect ratio} \\ 16h/10 & \text{for 16:10 aspect ratio} \\ 1h/9 & \text{for 21:9 aspect ratio} \end{cases}$$

The screen should be installed at the ergonomic height, so the viewers could watch the displayed images comfortably

$$H_{bb} = \begin{cases} 120 - 140 \text{ cm (for presentation projections)} \\ 60 - 80 \text{ cm (for home cinema projections)} \end{cases}$$

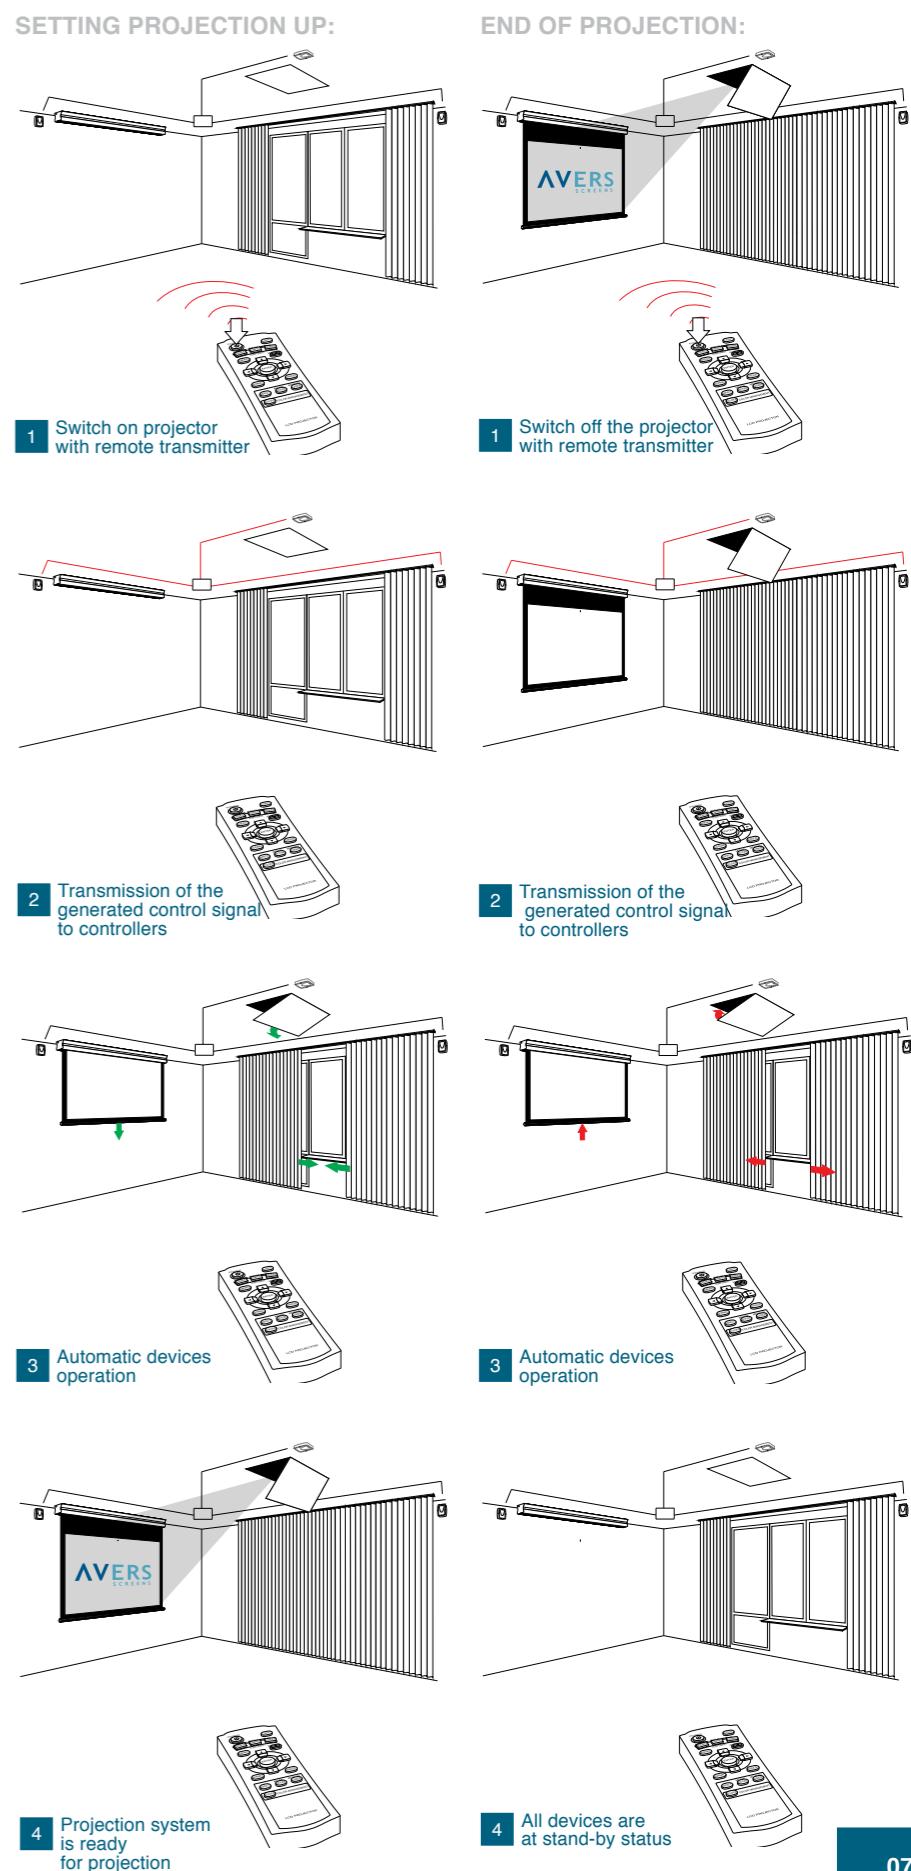

Premises size, projector brightness, ambient light conditions should be kept in mind when calculating the screen size.

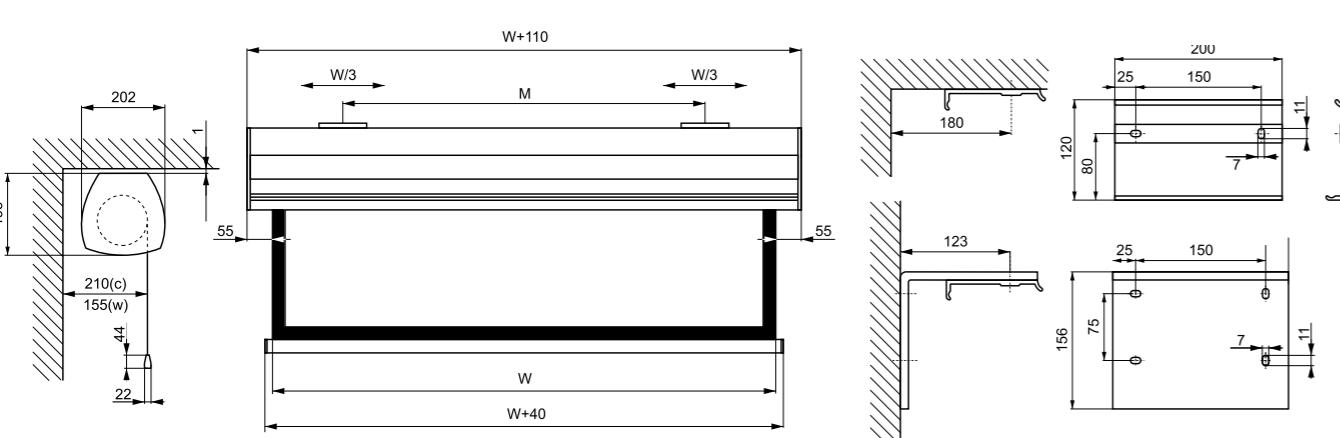

## SMART AND EASY INSTALLATION

Avers projection screens are designed for wall or ceiling installation. We have invented unique installation system to simplify the screen installation. Any of the installation systems elements is no visible after the screen installation. There is only 1 mm distance between the screen cassette and the ceiling, so the screen seems to be glued to the ceiling. The installation rails integrated with the screen cassette, ceiling bracket and the locking bolt are the 3 elements of the system. Installation of the screens up to 3,5 meter in the base requires: to drill just 2 holes in the ceiling, fix the brackets with 2 anchors, slide the screen rail at the bracket hinges, turn the screen at the position and secure it with the locking bolts. It is possible to fine tune the installed screen position horizontally in case it occurs after installation the picture is not displayed at the central position.

Screens dedicated for the in-ceiling installation at the recessed ceilings have dedicated modular design. There are 2 methods of screen installation depending on the recessed ceiling structure, screen surface is protected from dirt and damage during installation, inspections and maintenance of the installed screen are secured with the screen structure. The screen module and ceiling module remain hidden behind the masking module when the screen is installed. Disassembly of the masking module can be done by single person. It provides full access to all components of the screen behind.

Avers Screens products presented at the following pages could be used to integrate sophisticated projection systems with remote or automatic control. All electric appliances can be controlled either with Avers either 3rd party control systems. Please find below an reference projection system integrated with our products: electric projection screen, electric projector lift, lift dedicated ceiling flap, electric curtains Virgo system, BETA control system and a 3rd party projector. The system is operated remotely with the projector's remote transmitter. Switching the projector on will generate the control system by the BETA system transmitter. The signal is radio way transmitted to the controllers of electric engines of the screen, lift and curtains. The screen rolls out, the lift opens the flap and lowers the projector, the curtains blinds the windows. All devices stops automatically at the programmed positions, so the projection can be performed. After the projection is finished switching the projection off will cause rolling the screen in, hiding projector in the ceiling and opening of the curtains. BETA system controlling two types of devices (f.e. first type – screen and lift or second type two Virgo system). Our reference projection system can be used either for presentation either for home cinema applications.

 BASIC EQUIPMENT  
SWITCH

**FEATURES:**

- Small size white powder painted aluminum alloy case with color elements
- Customized screen program capable
- Easy to install, "Invisible" installation brackets for wall or ceiling installation included
- Long life of the projection fabric secured with automatic stop for rolling and re-rolling
- Custom screen installation with finetuning of the stop points for rolling and re-rolling of the projection fabric
- 230 W silent tubular engine with 5 years guarantee
- Easy to integrate with external control systems
- Wire steering with the wall switch included
- 1:1, 4:3, 16:9 or 16:10 aspect ratios
- Fabrics width range: 450 - 600 cm
- Dedicated fabrics:  
Silver P g=2,8 (3D Projection), Matt White P g=1,0, White Ice g=1,2, New Coral g=3,2 (Rear Projection)

**OPTIONAL ACCESSORIES:**

- IR-remote control system (ALFA-IR)
- Radio remote control systems (ALFA-RADIO, DELTA)
- Projector trigger control systems (ALFA-TRIGGER, ALFA TRIGGER WIRELESS, BETA)
- RAL palette powder painting
- Wall/ceiling spacers
- Black border BB (4:3, 16:9 and 16:10 aspect ratios, MWP fabrics only)
- Black border BT (16:9 and 16:10 aspect ratio, MWP fabrics only)

## FEATURES:

- White painted steel case
- Convenient 2-step screen installation
- Modular design: In-ceiling module, Screen module, Masking module
- Easy to install
- Perfect flat projection area due to the side tension system
- Black Borders
- Automatic stop for rolling and re-rolling
- Finetuning of the stop points of the fabric.
- Tubular engine with 5 years guarantee
- Power cord derivation - left side
- Easy to integrate with external control systems
- Wall control switch included.
- 4:3, 16:9 or 16:10 aspect ratios
- Fabrics width range: 180 - 300 cm
- Dedicated fabrics:
  - for home cinema: Matt Grey g=0,8, Matt White g=1,0
  - for presentation: Matt White g=1,0

## OPTIONAL ACCESSORIES:

- IR-remote control system ALFA-IR
- Radio remote control systems ALFA-RADIO
- Projector trigger systems ALFA-TRIGGER and ALFA-TRIGGER WIRELESS, BETA
- Black border BB (4:3, 16:9 and 16:10 aspect ratios, MW and MG fabrics only)
- Black border BT (16:9 and 16:10 aspect ratio, MW, MG and WI fabrics only)
- RAL palette powder painting

SCREENS

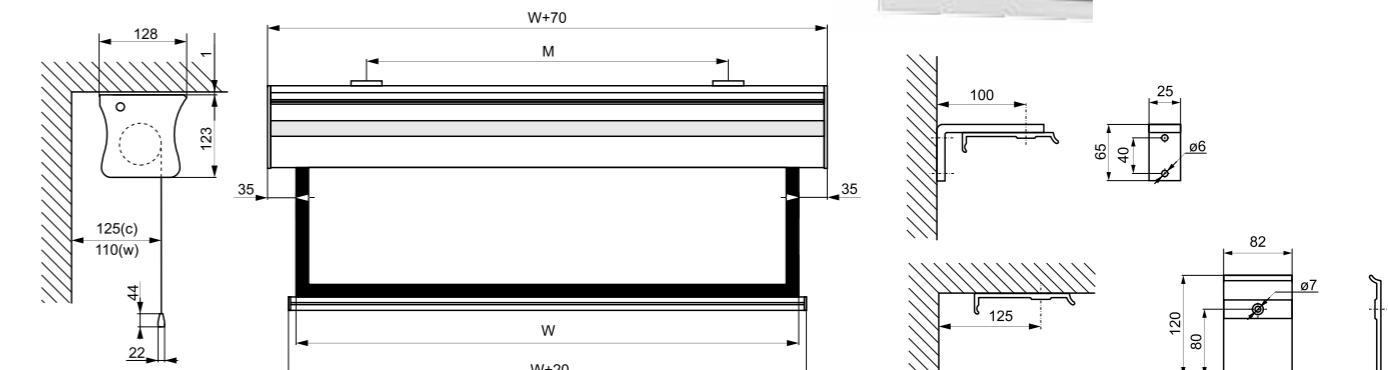

BASIC EQUIPMENT  
SWITCH

## FEATURES:

- White powder painted aluminum alloy case plastic with color elements
- Customized screen program capable
- Easy to install, "invisible" installation brackets for wall or ceiling installation included
- Long life of the projection fabric secured with automatic stop for rolling and re-rolling
- Custom screen installation with finetuning of the stop points for rolling and re-rolling of the projection fabric
- 125 W silent tubular engine with 5 years guarantee
- Easy to integrate with external control systems
- Wall steering switch included
- 1:1, 4:3, 16:9 and 16:10 aspect ratios
- Fabrics width range: 180 - 350 cm
- Dedicated fabrics:
  - For home cinema: Matt White P g=1,0, Matt Grey g=0,8, Matt White g=1,0
  - For presentation: Silver P. g=2,8 (3D Projection), Matt White P g=1,0, Matt White g=1,0, White Ice g=1,2, New Coral g=3,2 (Rear Projection)

## OPTIONAL ACCESSORIES:

- IR-remote control system ALFA-IR
- Radio remote control systems ALFA-RADIO
- Projector trigger systems ALFA-TRIGGER and ALFA-TRIGGER WIRELESS, BETA
- Black border BB (4:3, 16:9 and 16:10 aspect ratios, MW, MG and WI fabrics only)
- Black border BT (16:9 and 16:10 aspect ratio, MW and MG fabrics only)
- RAL palette powder painting
- Wall/ceiling spacers

# CONTROL SYSTEM

Accessories

AVERS  
SCREENS

## ALFA-IR

Infrared remote control system for all Avers electric screens and lifts.

### FEATURES:

- Dealer installable option
- Infrared control signal transmission
- Control unit with separate case
- Wall switch with integrated IR receiver
- Operation with more than one remote transmitters available
- Operation in case of remote transmitter failure possible
- Operation range - ca. 7 meters

### OPTIONAL ACCESSORIES:

- Additional infrared remote transmitter

Electric screens and lifts can be controlled manually or automatically. Remote control systems improves flexibility of the products and comfort of operation. Based on the experience of our partners we have prepared wide range of diversified remote control systems dedicated for Avers screens and lifts. We keep in our offer control systems dedicated for external installation to be installed during system integration by integrator himself as well as build-in the screen case, integrated at the factory.

## BETA

Remote control system triggered by increase of projector power consumption.

### FEATURES:

- Dealer installable option
- Control unit with separate case
- System controlling two types of devices (first type – screen and lift or second type two Virgo system f.e.)
- Programmable power consumption level required to trigger system operation
- Equipped with infrared receiver and infrared transmitter dedicated to pass projector control signal from projector IR transmitter to projector installed over the ceiling.

### OPTIONAL ACCESSORIES

- Extra wall switch

## DELTA

Optional remote control system dedicated for Avers electric screens

### FEATURES:

- Factory installable option
- Radio control signal transmission
- Control unit built-in the screen case
- Operation with more than one remote transmitters available (up to 10 psc)
- Operation range - ca. 20 meters

## ALFA-RADIO

Radio remote control system for all Avers electric screens and lifts.

### FEATURES:

- Dealer installable option
- Radio control signal transmission
- Designed for wall surface installation
- Control unit with separate case
- Extra wall switch
- Dedicated with multimedia projectors trigger output terminal
- Operation with more than one remote transmitters available (up to 20 psc)
- Operation in case of remote transmitter failure possible
- Operation range – open space ca. 100 meters, indoors ca. 35 meters

### OPTIONAL ACCESSORIES:

- Additional radio remote transmitter

## ALFA-TRIGGER

Triggered wired remote control system for all Avers electric screens  
Compatible with multimedia projectors with Trigger output terminal.

### FEATURES:

- Dealer installable option
- Wired control signal transmission
- Control unit with separate case
- Manual control function

### OPTIONAL ACCESSORIES:

- Additional radio and infrared remote transmitter
- Additional remote control radio signal transmission
- Additional wall switch

## ALFA-TRIGGER WIRELESS

Triggered wireless remote control system for all Avers electric screens  
Compatible with multimedia projectors with Trigger output terminal.

### FEATURES:

- Dealer installable option
- Wireless radio control signal transmission
- Control unit with separate case
- Manual control function
- Operation range – open space ca. 100 meters, indoors ca. 35 meters

### OPTIONAL ACCESSORIES:

- Additional radio and infrared remote transmitter
- Additional remote control radio signal transmission
- Additional wall switch
- Optionally wired control signal transmission

# BRACKETS

Accessories

## AluMont

Features:

- Aluminium alloy design
- Express installation (10 minutes) ready
- Projector cables can be hidden in the bracket column
- Reliable universal projector mount system with 3 or 4 fixing arms
- 3 dimensional projector tilt regulation
- Projector weight – up to 12 kg
- Cover hiding ceiling fixing screws

Available sizes:

- Short - fixed length - 135 mm
- Standard - zoom length - 340-540 mm
- Long - zoom length - 500-700 mm

Optional accessories:

- Customized length column, ask dealer for details

## SimpleMount

Features:

- Aluminium design column
- Express installation (10 minutes) ready,
- Reliable universal projector mount system with 3 or 4 fixing arms
- 3 dimensional projector tilt regulation
- Projector weight – below 10 kg

Available sizes:

- Short - fixed length - 78 mm
- Standard - zoom length - 455-640 mm

## ProMount

Features:

- Powder silver painted steel design
- Express installation (10 minutes) ready,
- Projector cables can be hidden in the bracket column
- Reliable universal projector mount system with 3 or 4 fixing arms
- 3 dimensional projector tilt regulation
- Projector weight – up to 15 kg
- Ceiling/wall installable (Standard version only)

Available sizes:

- Short - fixed length - 100 mm
- Standard - zoom length - 385-800 mm
- Long - zoom length - 785-1200 mm

Optional accessories:

- Customized length column, ask dealer for details
- RAL palette powder painting

## Short Mount

Features:

- Modern steel design
- Express installation (10 minutes) ready
- Projector cables can be hidden in the bracket column
- Reliable universal projector mount system with 4 fixing arms max. 370 mm
- 3 dimensional tilt regulation
- Projector weight - up to 10 kg

Available sizes:

- Standard - fixed length 600-850 mm
- Long - fixed length 850-1200 mm

# LIFTS

Accessories

## ProLift

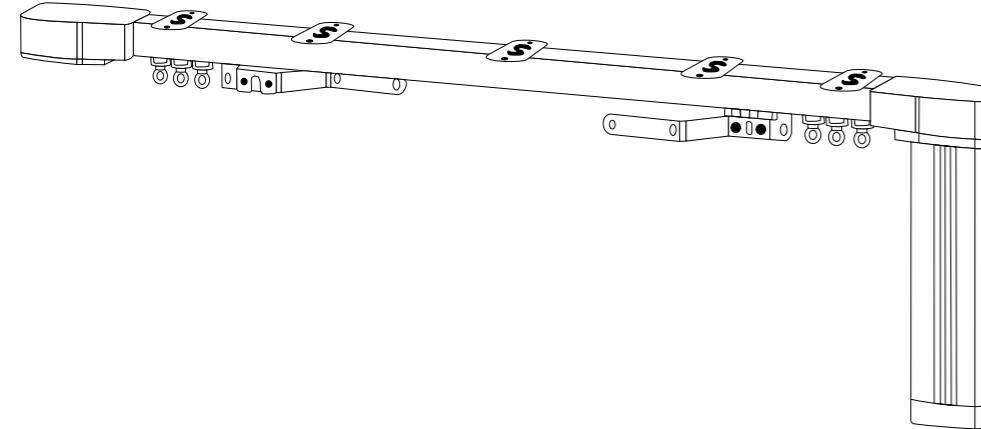

Features:

- Powder painted grey design
- Reliable universal projector mount system with 3 or 4 fixing arms
- 3 dimensional projector tilt regulation
- 125 W silent tubular engine with 5 years guarantee
- Fine tuning of the upper and lower stop points.
- Projector weight – below 10 kg

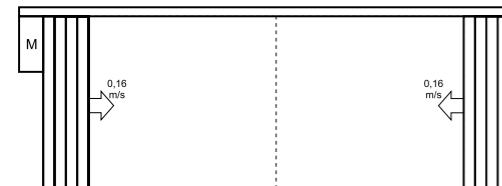

Optional accessories:

- Customized length column, ask dealer for details
- RAL palette powder painting
- Radio remote control system (CRC-2, DRC-2, C12VRC)
- ProLift Flap (dedicated for 60x60 cm segment recessed ceiling)

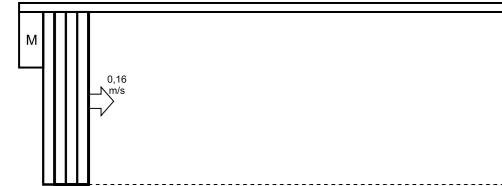

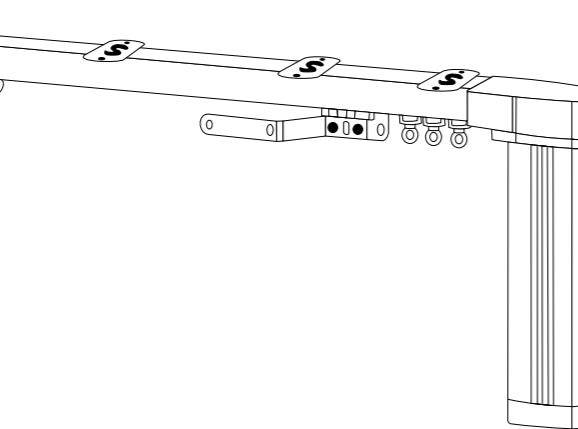

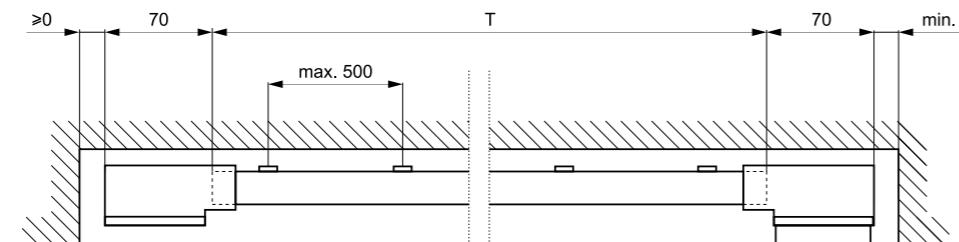

Center opening curtains. Maximum set length 12 m.

One side opening curtains. Maximum set length 12 m.

Two one side opening curtain systems. Maximum length 24 m.

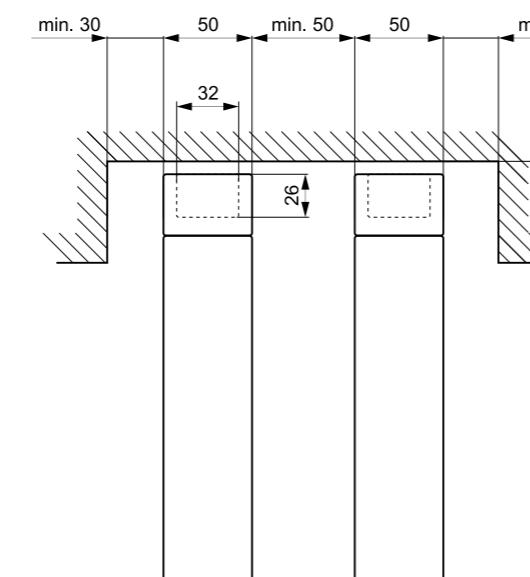

#### Features:

- silent electric motor
- Modular aluminium alloy track
- Master carriers driven with flexible timing belt
- Track range: 250 – 1200cm
- Maximum curtains weight: 20 - 60 kg
- Carrier line speed: 0,16m/s
- Recommended distance between curtain runners: 10cm
- All installation accessories in set
- One side or center opening capable
- Drive units and motor masking hooks included
- Customized screen program capable

#### Optional accessories:

- IR-remote control system (CRC-IR)
- Radio remote control systems (CRC, DRC)
- Projector trigger systems (C12VRC, C12V)
- Key locked wall switch

#### ALFA-SWITCH

Optional wall switch with integrated IR receiver  
(utilised for ALFA-IR control system)

#### BB

Black screen border,  
5 cm width (available at 4:3, 16:9  
and 16:10 aspect ratio screens)

#### Remote transmitter ALFA-IR/ALFA-RADIO/ DELTA

Optional remote transmitter dedicated for ALFA  
control system

#### BT

Black screen border, 5 cm width  
+ black top belt, 30 cm width  
(available at 16:9 and 16:10 aspect ratio  
screens only)

#### Wireless Trigger transmitter

Optional remote transmitter dedicated for ALFA  
TRIGGER control system

#### NIMBUS Wing

Vertical installation bracket dedicated  
for Nimbus screens allows screen  
rotation along the screen vertical edge  
(max. screen size 200x150cm)

#### TC12-15

Transport bag dedicated for Tripod12 and Tripod15

#### TC18-20

Transport bag dedicated for Tripod18 and Tripod20

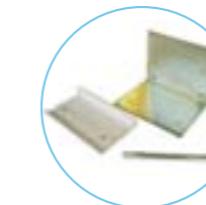

#### TC24

Transport bag dedicated for Tripod 24

#### Prolift Flap

Flap mechanism dedicated  
for installation at segmented  
recessed ceilings (60x60 cm standard)

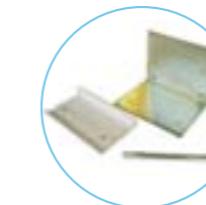

#### RAL color

All case parts made with metal  
and finished with any paint  
coating can be optionally painted  
to custom color defined with  
the RAL color palette.

#### SH Holder

all/ceiling 60 cm spacer for all fixed screens  
(electric, manual and frame) installation

#### Installation set

Additional set of brackets for screen  
wall/ceiling installation (each screen  
is supplied with 2 installation sets  
as a standard)

#### SRMS

Brackets dedicated for screen installation  
under recessed ceiling
